The polynucleotides are also believed to be useful for gene therapy. This polynucleotide was isolated from a human foetal brain cDNA library.
                                                                                                                                                                                                      2767

The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, remal cancer, colon cancer, gastric cancer, prostate cancer and

CC full-length cDNAs defined in the specification. Where a primer set comprises (a) an ollgo-dT primer and an oligonucleotide comprises (b) an ollgo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of collgonucleotide comprises at least 15 nucleotides; or (b) a combination cof an oligonucleotide comprises at least 15 nucleotides; or (b) a combination cof an oligonucleotide comprises at least 15 nucleotides; or (b) a combination complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a complementary of the complementary to a conjugate which comprises a 1'-end sequence complementary to a collection of complementary and sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, comparison the complementary full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and methods. CC full-length cDNAs defined in the specification. Where a primer set to the complementary strand of a polynucleotide which complementary to the following sequences defined in the specification, where the cc oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination co f an oligonucleotide comprising a sequence complementary to the cc complementary strand of a polynucleotide which comprises a 5'-end cc polynucleotide which comprises a 3'-end sequence complementary to a conjuncted comprises a 3'-end sequence, where the coligonucleotide comprises a 3'-end sequence complementary to a coligonucleotide comprises a 3'-end sequence, where the coligonucleotide comprises a 3'-end sequence, where the coligonucleotide comprises a 1'-end sequence, where the coligonucleotide comprises a 3'-end sequence, where the coligonucleotides and classification and/or diagnosis of the absorbation of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CL AAH3633 to AAH18742 represent human callo sequences; and AAH3629 to AAH13632 capresent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-AUG-1999;

CC AAA43426 to AAA45925 represent specifically claimed secreted expressed CC sequence tags (sESTs), isolated from human, mouse, chicken and rat CC tissue sources. The sESTs can have a range of activities depending on CC the tissues they were isolated from. The activities include: CC chemokinetic; proliferative; immunomodulatory; haematopoletic; chemokinetic; analgesic; haemostatic; thrombolytic; antifinflammatory; cc chemokinetic; antibacterial; antifungal; antiviral; antifinflammatory; cc cytostatic; antibacterial; antifungal; antiviral; antifinflammatory; cc antiasthmatic; vulnerary; antiulcer; osteopathic; neuroprotective; cc anticonvulsant; and antidepressant. The sESTs can be used for gene ct therapy and in vaccines. The sESTs are useful as probes for the convolvant; and isolation of full-length cDNAs and genomic DNA concludes which correspond to the SESTs. Proteins encoded by the sESTs can be useful in assays for determining biological activity and raising cantibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions cathoporosis, osteopathritis, central nervous system disorders (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, cc (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation continued is orders (haemaphilla, thrombosis), inflammatory disorders (Crobn's disease), tumours, bacterial, fungal or viral infections, depression and continued continued in the procession and continued in th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Jacobs K, F

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes colon tumour associated proteins (I) and the polynuclectides (II) that encode them. (I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC Polynucleotides. The library is used to detect differentially expressed CC genes correlated with a cancerous state of a mammalian cell and can CC detect colon, prostate, breast and lung cancer. The library can be used CC detect colon, prostate, breast and lung cancer. The library can be used CC of the polynucleotides. The probes can be used for chromosome mapping of CC of the polynucleotides and for detection of transcription levels. Ribozymes CC or antisense oligonucleotides can be generated. The polynucleotides and their gene products are used as genetic or blochemical markers (e.g. in CC blood or tissues) that will detect the earliest changes along the CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC antibodies against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia, XX dysplasia and hyperplasia.

The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity haematopoiesis regulating activity, tissue growth activity, haemostatic and thrombolytic activity, receptoryligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibitio activity. The EST sequences are also stated to be useful for gene

                                                                                                                                                                                                                                                 CC The present sequence is one of 3351 sequences in a library of human CC polynucleotides. The library is used to detect differentially expressed CC genes correlated with a cancerous state of a mammalian cell and can CC detect colon, prostate, breast and lung cancer. The library can be used CC to produce probes for detection of mRNA and to produce additional copies CC of the polynucleotides. The probes can be used for chromosome mapping of CC the polynucleotide and for detection of transcription levels. Ribozymes CC or antisense oligonucleotides can be generated. The polynucleotides and CC their gene products are used as genetic or biochemical markers (e.g. in CC blood or tissues) that will detect the earliest changes along the CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC preventive interventions. The polynucleotides, polypeptides and CC creat the cancers and proliferative disorders such as neoplasia, CC dysplasia and hyperplasia.
                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δÃ
          CC Sequences AAA77722-A78199 represent 478 cDNAs encoding proteins or CC portions of proteins which are associated with human colon tumour so the invention also specifically discloses 8 human colon tumour proteins CC (AAB11897-B11904). The nucleic acids, the polypeptides they encode, and CC antigen presenting cells (APCs, preferably dendritic cells) expressing CC such polypeptides may be used in vaccines that target tumour cells, CC especially colon tumour cells, thereby inhibiting the development of CC cancer. T-cells specific for the polypeptide expressed by the APC are CC used to remove tumour cells from biological samples, especially blood or CC controls thereof. The sample or the isolated T-cells specific for the polypeptide can then be used to inhibit cancer development. CD4+ and/or CC collect acid of the invention, or an APC expressing such a polypeptide, coloned and then administered back to the patient to inhibit cancer coloned and then administered back to the patient to inhibit cancer coloned and then administered back to the patient to inhibit cancer coloned and the polypeptides may be used to determine the expression level coloned and the polypeptides may be used to determine the expression level coloned and the polypeptides may be used to determine the expression level coloned and the polypeptides may be used to determine the expression level coloned and the polypeptides may be used to determine the expression level coloned and the polypeptides may be used to determine the expression level coloned and the polypeptides may be used to determine the expression level coloned and the polypeptides may be used to determine the such the mean to the polypeptides and antibodies and antibodies and antibodies are processed to the polypeptides and antibodies and antibodies are polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             23-DEC-1998;

```
The present invention describes colon tumour associated proteins (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases (C associated with inappropriate colon tumour associated protein (TCAP) C expression, such as colonic cancer. For example, (I) and (II) may be used in the prevention, diagnosis and treatment of diseases (C associated with inappropriate colon tumour associated protein (TCAP) (C expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by (C rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the CC patients own production of them. Additionally, (II) may be used to (C produce the TCAP proteins, by inserting the nucleic acids into a host (C cell culturing the cell to express the protein. (II) and its (C culturing the cell to express the protein assays to detect and (C quantitate the presence of similar nucleic acids in samples, and (C and) assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies against TCAPs (C anti-(I) antibodies and antagonists may also be used to down regulate (e.g. by enzyme linked immunosorbant assay (ELISA)). Ani28460 to Ani29512 and AAM24494 to AAM24523 represent nucleotide and amino acid sequences (C given in the exemplification of the present invention.

```
CC the polynucleotides (II) that encode them. (I) have cytostatic activity.

CC (I) and (II) can be used in gene therapy and vaccine production. (I) and

CC (II) may be used in the prevention, diagnosts and treatment of diseases

CC associated with inappropriate colon tumour associated protein (YCAP)

CC expression, such as colonic cancer. For example, (I) and (II) may be

CC used to treat disorders associated with decreased expression by

CC rectifying mutations or deletions in a patient's genome that affect the

CC produce the TCAP by expressing inactive proteins or to supplement the

CC produce the TCAP proteins, by inserting the nucleic acids into a host

CC complementary sequences may also be used as DNA probes in diagnostic

CC polymerase chain reaction (PCR) and hybridisation assays to detect and

CC quantitate the presence of similar nucleic acids in samples, and

CC therefore which patients may be in need of restorative therapy. (I) may

CC and in assays to identify modulators of TCAP expression and activity.

CC TCAP expression and activity. The anti-(I) antibodies may also be used to

CC as diagnostic agents for detecting the presence of TCAPs in samples

CC and AAN24523 represent nucleotide and amino acid sequences

CC alven in the examplification of the present on the present on the present on the present of TCAPs in samples

cardiovascular activity, and can be used in the cardiovascular activity, and can be used in the cardiomy diagnosis and treatment of diseases associated with cardinapropriate anglogenesis. The polypeptides may also be used as antigens cin the production of antibodies against them and in assays to identify modulates of their expression and activity. The antibodies and cardivity and againsts the antibodies and activity can design that may also be used to down regulate expression and activity can modulate angiogenesis. The antibodies may also be used as diagnostic and modulate angiogenesis. The antibodies may also be used as diagnostic can modulate angiogenesis. The antibodies may also be used as diagnostic can modulate angiogenesis. The antibodies may also be used as diagnostic can be seen that may be prevented, diagnosed and/or treated by the above concludes include, for example vascular tumours, proliferative tumours, proliferative tumours, proliferative conclude, for example vascular tomours, proliferative tumours, can associated with neovascularisation, restenosis subsequent to balloon can associated with neovascularisation, restenosis subsequent to balloon can angioplasty, scar tissue over production, peripheral vascular disease, hypertension, inflammatory vasculatides, Reynaud's disease and capperfusion injury, angina, myocardial infarctions, chronic heart conditions, heart failure such as congestive heart failure, age-related conditions, heart failure such as congestive heart failure, age-related conditions, heart failure such as congestive heart failure, age-related conditions, heart failure such as congestive heart failure, age-related conditions, heart failure such as congestive heart failure, age-related conditions, heart failure such as congestive heart failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-NOV-1999;

No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA ilbraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

                                                                                                                                                                                                                                                                                                                   000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
         Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     103
